FILE FORMATS

The FIRST® logos are available in various digital formats upon request to FIRST Marketing (marketing@firstinspires.org). Lockups for dark backgrounds are only available in EPS and PNG formats because of the use of white, which requires a transparent background.

The following information describes the best application usage for each of the file formats:

Adobe Illustrator Encapsulated PostScript (EPS) — This file format is vector-based instead of raster to give you the freedom to enlarge or reduce the lockup without any quality loss. This is a good option for signage and the version most graphic designers will request.

Portable Document Format (PDF) — This file format is vector-based and is used to display documents and graphics correctly — no matter the device, application, operating system, or web browser. Because it is a near universal standard, PDF files are often the file format requested by printers to send a final design into production.

Joint Photographic Experts Group (JPEG) — This file format is a lossy raster format, which means it loses information when it is scaled larger than its original size. JPEG/JPG files are one of the most widely used formats online, typically for photos, email graphics, and large web images like banner ads. Silkscreeners often request this format.

Portable Network Graphics (PNG) — This file format has built-in transparency, but can also display higher color depths, which translates into millions of colors. Think of PNGs as the next-generation GIF. PNGs are a web standard and are quickly becoming one of the most common image formats used online. PNG images are typically used in PowerPoint due to their transparent background.

COLOR FORMATS

The FIRST® logos are available in various color formats.

The following information describes the best application usage for each of the color formats:

Press (CMYK & PMS) — CMYK is the recommended color system for any material that will be printed. The CMYK color system is most commonly referred to as the four-color process because it uses four different colors to produce different hues.

PMS (Pantone Matching System) — also known as Spot or Pantone colors, should be used when printing merchandise or apparel with a printer that requires PMS files.

Screen (RGB) — RGB files should be used only in digital applications, most commonly when designing for the web because it represents the same colors used in computer screens, TV screens, as well as mobile device screens (RGB stands for Red, Green, and Blue.).
