1.0 Introduction

1.1 What is FIRST® Tech Challenge?
FIRST® Tech Challenge is a student-centered program that focuses on giving students a unique and stimulating experience. Each year, teams engage in a new game where they design, build, test, and program autonomous and driver operated robots that must perform a series of tasks. To learn more about FIRST® Tech Challenge and other FIRST® Programs, visit www.firstinspires.org.

1.2 FIRST Core Values
We express the FIRST® philosophies of Gracious Professionalism® and Coopertition® through our Core Values:

- **Discovery**: We explore new skills and ideas.
- **Innovation**: We use creativity and persistence to solve problems.
- **Impact**: We apply what we learn to improve our world.
- **Inclusion**: We respect each other and embrace our differences.
- **Teamwork**: We are stronger when we work together.
- **Fun**: We enjoy and celebrate what we do!

2.0 Gracious Professionalism®

FIRST® uses this term to describe our programs’ intent.

*Gracious Professionalism®* is a way of doing things that encourages high-quality work, emphasizes the value of others, and respects individuals and the community.

Watch Dr. Woodie Flowers explain *Gracious Professionalism* in this short video.
3.0 The Competition – Definitions and Rules

3.1 Overview
Students that engage in the FIRST Tech Challenge program develop Science, Technology, Engineering, and Math (STEM) skills and practice engineering principles while realizing the value of hard work, innovation, and sharing ideas.

There are two types of competition formats a Team might experience this season; Traditional events and remote events. This manual describes remote events; however, some Teams may switch between formats depending on social distancing rules within their state/region. Below are descriptions of both formats.

3.1.1 Traditional Events
A traditional FIRST Tech Challenge event is typically held in a school or college gymnasium, where Teams use Robots to compete in the current seasons game challenge. Teams participating in traditional events compete with alliance partners in a head to head style of competition on the official FIRST Tech Challenge Playing Field. Teams compete in a series of Matches that determine their ranking at a traditional tournament. The size of a traditional event can range anywhere from 8 Teams to over 50 Teams competing in one place. Traditional events are generally scheduled by the local program delivery partner, and are run by many volunteers including referees, judges, scorekeepers, queuers, and other key volunteers. Traditional events consist of Robot inspections, Robot competitions, judging interviews (for most competitions), and an overall celebration of Teams and their accomplishments. To learn more about traditional events, please read the Game Manual Part 1 – Traditional Events manual.

3.1.2 Remote Events
Remote events were developed to mimic traditional FIRST Tech Challenge events, while practicing social distancing guidelines. Since Teams are not able to gather and compete in the traditional head-to-head competition format, the season’s official full Playing Field has been adapted to allow Teams to play as a single Team. Remote Teams may order an official half version of this seasons field, or compete using a modified version of the field, which will be released at kickoff on 9/12/2020. Teams will still sign up for events and will be provided a window to submit their own Match scores, which will determine their rankings. Unlike traditional events, the scoring of the official Matches is done by the Team, rather than an event volunteer. Teams will participate in judging interviews via video conference.

3.2 Eligibility to Compete in Official FIRST Tech Challenge Competitions:

3.2.1 North America Teams
To compete in an official FIRST Tech Challenge competition at any level, a Team must be registered and in good standing with FIRST.

1. The Team must complete the registration process through the Team Registration System.
2. The Team registration fee must be paid.
3. Two adults must pass the Youth Protection screening process.

3.2.2 Outside North America
Teams outside of North America are required to register through the Team Registration System. The registration ensures that Teams competing remotely will have access to the necessary software application to compete in the current season. Fees will not be due to FIRST for the registration. Teams outside of North America should consult the program delivery partner in their region for program fees and product purchase.

3.3 Competition Types
There are several types of competitions that Teams and other organizers hold throughout the FIRST Tech Challenge season and off-season. Competition types are listed in the following section.
3.3.1 Scrimmage
A scrimmage is an unofficial FIRST Tech Challenge competition where Teams do not advance. Teams compete at a scrimmage solely to prepare for an official Tournament. A scrimmage can be done in person or via the Internet as a way for Teams to practice, learn the rules, and mentor one another during the Robot build process.

Anyone can host a scrimmage to prepare for an official competition. Teams hosting a scrimmage are encouraged to tell their local Program Delivery Partner that such an event is taking place. Teams that choose to create and host a local meet are responsible for finding a location, organizing the format for the day, and inviting other Teams to participate. Teams may also have to secure the field elements, computers, and other items.

3.3.2 League Meets
A league meet is a competition in which Teams compete in Qualification Matches only. Rankings from one meet to the next accumulate as outlined in section 5.2. The number of meets a Team can play in may vary by region. Whenever possible, it is highly encouraged that Teams participate in as many meets as they can. Some standard competition guidelines may be adapted for those regions that participate in the league format. Teams should contact their program delivery partner for more information about the scheduling, structure, advancement, and processes that are unique to the league/meet in their region.

3.3.3 Qualifying Tournaments and League Tournaments
Hosted and managed by FIRST Tech Challenge program delivery partner or program delivery partner-appointed host. Qualifying Tournaments follow the format outlined in section 4.0. Qualifying Tournaments are held before Championship Tournaments. The number of Teams advancing to the state/regional championship tournament depends on the capacity of the state/regional championship tournament, the number of qualifying tournaments, and the number of Teams attending the qualifying tournament. The advancement criteria for moving up to the next tournament level is detailed in section 6.0.

3.3.4 Super Qualifying Tournaments
These tournaments are held in regions with a large number of Teams and/or leagues. In these regions, Teams advance from either a league tournament or qualifying tournament to a super-qualifying tournament, and then to the state/regional championship.

3.3.5 Championship Tournaments
Hosted and managed by a FIRST Tech Challenge program delivery partner, championship tournaments uphold certain standards in format, judging, awards, and overall quality. Some championship tournaments require that Teams advance from a qualifying tournament or league tournament to advance to the state/regional championship. Championship tournaments may include Teams from a geographic region, province, state, country, or several countries. Teams should expect a higher level of competition, both on the field and in the judging room at championship tournaments.

3.3.6 World Championship
Hosted and managed by FIRST, the world championships, held in Houston, Texas and Detroit, Michigan, are the culminating events for all FIRST programs. FIRST Tech Challenge Teams advance to the world championship through their state/regional championship tournament. The world championship includes Teams from several countries, and Teams should expect a higher level of competition, both on the field and in the judging room.

3.4 Competition Definitions
Alliance Station – The designated Alliance area next to the Playing Field where the Drivers and Coach stand or move within during a Match.

Competition Area – The Area where the Playing Field is located.

Section 3 – The Competition

Revision 1.2: 4/22/2022
Drive Team - Up to four representatives two (2) drivers, one (1) coach, and one (1) Human Player from the same Team.

Human Player – A student Team member that supplies Scoring Elements during a Match.

It is preferred that the Human Player is a student competing on the Team. However, for the 2020-2021 season, exceptions can be made to allow an adult mentor, coach, parent, etc. to fill the role as Human Player if there are strict social distancing guidelines that do not allow more than a Team of one student to meet and participate in official Matches.

Playing Field –The area where the game elements are located and where Robots play Matches.

Ranking Points/Total Ranking Points – The first basis for ranking Teams. For a single Team competing remotely, the Team’s final score for a Match is used as their Ranking Points. For Teams that compete at a traditional tournament, each Team receives their Alliance’s final score for a Match as Ranking Points. Total Ranking Points is the sum of the Ranking Points of all non-Surrogate Matches that a Team plays in a tournament. Please see section 5.0 for further explanation for how this is used to determine a Team’s ranking.

Robot - Any mechanism that has been built to compete in the game challenge and complies with the Robot rules outlined in Section 7 of this manual.

Sports Start – A model of competition where Teams start their Robot after the 3-2-1 countdown.

Team – An official FIRST Tech Challenge Team consists of no more than 15 student Team members. A Team is made up of pre-college students and is designed for students in grades 7-12. Students cannot be older than high school-aged if they are participating Team members. All Teams in North America are required to register through the Team Registration System. Teams must have a minimum of two Lead Coaches or Mentors that have registered through the Team Registration System and have passed the Youth Protection Program screening. The Team must be in good standing through the registration system to compete in FIRST Tech Challenge official tournaments.

Teams outside of North America are required to register through the Team Registration System. Teams registered will receive the regular Team email blasts, receive access to the Game Q&A system, receive permanent FIRST team numbers, and can access nominations for the Dean’s List Award.

TieBreaker Points/Total TieBreaker Points – TieBreaker Points are used as the tiebreakers when Teams have equal Total Ranking Points. There are two types of TieBreaker Points, TBP1 and TBP2.

TBP1: For a single Team competing remotely, the Team’s Autonomous Period score for a Qualification Match is used as their TBP1. For Teams that compete at a traditional tournament, each Team receives their Alliance’s Autonomous Period score for a Qualification Match as TBP1. Total TBP1 is the sum of the TBP1s of all non-Surrogate Qualification Matches that a Team plays in a Tournament.

TBP2: For a single Team competing remotely, the Team’s End Game specific task score for a Qualification Match is used as their TBP2. For Teams that compete at a traditional tournament, each Team receives their Alliance’s End Game specific task score for a Qualification Match as TBP2. Total TBP2 is the sum of the TBP2s of all non-Surrogate Qualification Matches that a Team plays in a Tournament.

Please see section 5.0 for further explanation for how this is used to determine a Team’s ranking.
**Tournament** – A Tournament is an event that advances Teams to the next level of competition within a state/region, or to the world championship. For many Teams, a Tournament is their culminating event.

### 3.5 Competition Rules

There are competition rules in the Game Manual Part 1 – Traditional Events, that do not apply to Teams competing remotely. Those rules have been removed from this manual; however, the numbering of the rules has been kept the same for consistency between both manuals.

*C01* Egregious behavior by any Team, Team member, or other representative of the Team is not tolerated at a FIRST Tech Challenge Competition.

*C05* Each registered Team may enter only one Robot (a Robot built to play the current season’s game challenge) into the FIRST Tech Challenge competition. It is expected that Teams will make changes to their Robot throughout the season and at competitions.

a. It is against this rule to compete with one Robot while a second is being adjusted or assembled at a competition.

b. It is against this rule to switch back and forth between multiple Robots at a competition.

c. It is against this rule to register and attend concurrent competitions with a second Robot.

d. It is against this rule to use a Robot built by another Team at a competition.

e. It is against this rule to compete in concurrent remote events (e.g. overlapping event date windows) with the same Robot.

Violations of this rule will immediately be considered deliberate and egregious.

*C07* Teams competing in a meet, league Tournament, qualifying Tournament, and championship Tournament will compete in no fewer than five (5) Qualification Matches, and no more than six (6) Qualification Matches. Teams competing remotely will have a total of six (6) Qualification Matches.

*C15* All Team members, coaches, and their guests must wear ANSI Z87.1 certified safety glasses while in the Pit or Competition Area. Prescription glasses with ANSI Z87.1 approved Commercial Off-The-Shelf side shields are also allowed.

*C16* Batteries must be charged in an open, well-ventilated area.

*C17* Open-toed or open-backed shoes are not allowed in the Competition Area.

*C18* There is no running, skateboarding, roller skating, ‘hover boards’, and/or flying drones are not allowed at any competition. These can create safety hazards to the Teams, spectators, or volunteers attending the competition.
4.0 Remote Competition Overview

Remote competitions are a way for Teams to compete while practicing social distancing. Teams are required to register with FIRST in order to access the cloud-based scoring system where their official Matches are submitted. This section of the manual outlines what Teams should expect while competing in remote competitions.

4.1 Consent and Release Forms and Team Roster

Each student competing at a FIRST Tech Challenge competition must have a signed consent and release form completed by a parent or legal guardian. Students cannot compete without a signed consent and release form. These forms can be filled out electronically or by hard copy.

- Electronically – A parent or legal guardian of the student can create a youth team member registration through the FIRST website and complete the consent and release form online.
- Hard copy – A hard copy of the form may be printed from the Team registration system and filled out be signed by a parent or legal guardian. Either the printed original, or a photocopy of the printed original of the form must be provided to the tournament director or program delivery partner.

The roster, printed from the team registration system must be handed in at event registration. The roster will show that each student’s parent or guardian has electronically filled out the consent and release form online with a green checkmark. If the roster from the team registration system is blank or missing Team members’ names, the coach should write in the names of each student competing. The hard copies of those consent and release forms must be turned in along with the roster.

4.2 Remote Competition Registration

Once a Team registers with FIRST, they must also register for their competition. For event information such as dates, competition registration, and competition format, Teams should contact their local program delivery partner.

4.3 Judging Interviews

Teams that compete in a remote Tournament (except for league meets, where judging interviews do not take place) are eligible for judged awards. Judging interviews are held via video conference and will be set up by either the local program delivery partner, a judge advisor, or tournament director.

Further details about judging interviews will be released at a later date.

4.4 Qualification Matches

Qualification Matches are the official Matches used to determine a Teams ranking. Teams will have up to a 7 day* window for the specific remote event(s) they are registered for to submit their six (6) official Qualification Match scores to FIRST. Teams are not required to play Matches on a specific date, however any unplayed/unscored Qualification Matches not submitted within the allotted timeframe will receive a zero score. Teams are ranked using their individual Team performance after their remote event ends.

*Please be sure to check with your local program delivery partner for details about the Match scoring window.

4.5 FTC Scoring Software

The FTC Scoring software is a Cloud-based application that allows Teams to score their Matches remotely and provide official scores to FIRST. Teams receive access to the software once they have registered for the season. Each Team can use their firstinspires.org Team dashboard user account to access the system and submit their Qualification Match scores. It is required that official Qualification Match scores are submitted via the FTC Live Cloud application within the allotted timeframe to count toward the Team’s rankings.

The FTC Live Cloud application is similar to the live scoring system used in traditional events. Teams can run the FTC Live Cloud software to use the Match timers, displays, and score their Match as the Match is played.
In order to run the software to score a *Match* as it happens, an Internet connection is required. For *Teams* competing in a location that does not have high speed Internet access, the *Team* may use paper scoresheets to record the status of the *Match*. The *Team* must then ensure that the scores recorded on paper are submitted through the FTC Live Cloud software before the remote event deadline.

More detailed information, including scoring guides, will be available to *Teams* in October 2020.
5.0 Calculating Ranking

5.1 Competition Ranking Calculation

Each Team at a competition is ranked according to the following sort order:

1. Total Ranking Points; highest to lowest, then
2. Total TieBreaker Points (TBP1); highest to lowest, then
3. Total TieBreaker Points (TBP2); highest to lowest, then
4. Random electronic selection

Ranking Points and TieBreaker Points are awarded at the end of each Match.

5.2 League Tournament Ranking Calculation

League Tournament rankings are based on the top ten (10) Matches from all previous league meets plus the top five (5) Matches from the league Tournament. The ten (10) league meet Matches are selected using the sort order from Section 5.1. Teams with fewer than fifteen (15) total Matches after the Qualification Matches at the League Tournament have been played will only be ranked on the Matches that they have played.
### 6.0 Advancement Criteria

#### 6.1 Eligibility for Advancement

*T eams* are eligible for advancement at any one of the first three tournaments they participate in at any of the following levels, **regardless of the region.** This applies to both *Teams* in North America, and *Teams* outside of North America:

- League Tournament
- Qualifying Tournament
- Super Qualifying Tournament
- Championship Tournament

*A Team* can only earn a spot to one world championship event per season.

<table>

<td>A <em>Team</em> may participate in more than three tournaments in the same competition tier but are not eligible for consideration for advancement or awards at tournaments beyond their third.</td>
</tr>
<tr>
<td>State or Regional Championship Tournament</td>
<td>FIRST Tech Challenge World Championship</td>
<td><em>Teams</em> advance from a state or regional championship tournament to <strong>one</strong> of the FIRST Tech Challenge World Championships.</td>
</tr>
</tbody>
</table>

#### 6.1.1 Inspire Award Eligibility

*T eams* that have won the Inspire Award at another event of the same level, regardless of the region, cannot be considered for the Inspire Award or as an Inspire Award Finalist at additional tournaments at that level.

All *Teams* are eligible to be considered for all judged awards at a World Championship Tournament.

#### 6.2 Order of Advancement – Remote Competitions Only

If the *Team* listed has already advanced or there is no *Team* fitting that description (as in Award 3rd place at events of 20 or fewer *Teams*)

1. Inspire Award Winner
2. Highest Ranked *Team* not previously advanced
3. Inspire Award 2nd place
4. Highest Ranked *Team* not previously advanced
5. Inspire Award 3rd place
6. Highest Ranked *Team* not previously advanced
7. Think Award Winner
8. Highest Ranked *Team* not previously advanced

---

**Section 6 – Advancement**

Revision 1.2: 4/22/2021
9. Connect Award Winner
10. Highest Ranked *Team* not previously advanced
11. Collins UTC Innovate Award Winner
12. Highest Ranked *Team* not previously advanced
13. Control Award Sponsored by Arm, Inc. Winner
14. Motivate Award Winner
15. Design Award Winner
16. Highest Ranked *Team* not previously advanced
17. Think Award 2nd Place
18. Highest Ranked *Team* not previously advanced
19. Connect Award 2nd Place
20. Highest Ranked Team not previously advanced
21. Collins UTC Innovate Award 2nd Place
22. Highest Ranked *Team* not previously advanced
23. Control Award Sponsored by Arm, Inc. 2nd Place
24. Highest Ranked *Team* not previously advanced
25. Motivate Award 2nd Place
26. Highest Ranked *Team* not previously advanced
27. Design Award 2nd Place
28. Highest Ranked *Team* not previously advanced
29. Think Award 3rd Place
30. Highest Ranked *Team* not previously advanced
31. Connect Award 3rd Place
32. Highest Ranked *Team* not previously advanced
33. Collins UTC Innovate Award 3rd Place
34. Highest Ranked *Team* not previously advanced
35. Control Award Sponsored by Arm, Inc. 3rd Place
36. Highest Ranked *Team* not previously advanced
37. Motivate Award 3rd Place
38. Highest Ranked *Team* not previously advanced
39. Design Award 3rd Place
40. Highest Ranked *Team* not previously advanced
41. Highest Ranked *Team* not previously advanced
42. Highest Ranked *Team* not previously advanced
43. Highest Ranked *Team* not previously advanced
44. Highest Ranked *Team* not previously advanced
45. Highest Ranked *Team* not previously advanced
46. Highest Ranked *Team* not previously advanced
47. Highest Ranked *Team* not previously advanced
48. Highest Ranked *Team* not previously advanced
49. Highest Ranked *Team* not previously advanced
50. Highest Ranked *Team* not previously advanced
51. Highest Ranked *Team* not previously advanced

**Events with 20 or fewer teams may select an award winner, and a single award finalist, rather than a 2nd and 3rd place winner.**
7.0 The Robot

7.1 Overview
A FIRST Tech Challenge Robot is a remotely operated vehicle designed and built by a registered FIRST Tech Challenge Team to perform specific tasks when competing in the annual game challenge. This section provides rules and requirements for the design and construction of a Robot. Teams should be familiar with the Robot and game rules before beginning Robot design.

7.2 Robot Control System
A FIRST Tech Challenge Robot is controlled by an Android-based platform. Teams will use two (2) Android Devices to control their Robot and compete in a “Sports Start” model of competition. One Android Device is mounted directly onto the Robot and acts as a Robot Controller. The other Android Device is connected to a pair of gamepads and acts as the Driver Station.

For more information, tutorials, and to access our Android Technology forum, please visit: https://www.firstinspires.org/resource-library/ftc/robot-building-resources

7.2.1 Robot Technology Definitions
Android Device – A smartphone running the Android operating system. See rules <RE06> and <RS03> for a list of allowed smartphones and operating system versions.

Driver Station – Hardware and software used by a Drive Team to control their Robot during a Match.

Java – The recommended programming language for the Robot Controller.

Logic Level Converter – An electronic device that allows an encoder or sensor, that operates using 5V logic levels, to work with the REV Expansion Hub and/or REV Control Hub, which operates using 3.3V logic levels. This device may contain a step-up voltage converter (from 3.3V to 5V) and a dual channel, bidirectional logic level converter. This device may be used directly with a 5V digital sensor or with an I²C Sensor Adaptor Cable to a 5V I²C sensor.

I²C Sensor Adapter Cable – An adapter to change the pin orientation of the REV Robotics Logic Level Converter to match a Modern Robotics compatible I²C sensor.

Mini USB to OTG (On-The-Go) Micro Cable – The connection between the Android Device Robot Controller and the REV Expansion Hub.

Op Mode – An Op Mode (short for "operational mode") is software that is used to customize the behavior of a competition Robot. The Robot Controller executes a selected Op Mode to perform certain tasks during a Match.

OTG Micro Adapter – Connects a USB hub to Micro USB OTG (On-The-Go) port on the Driver Station Android device.

REV Control Hub – An integrated electronic device with four (4) DC motor channels, six (6) servo channels, eight (8) digital I/O channels, four (4) analog input channels, and four (4) independent I2C buses. The REV Control Hub also serves as the Robot Controller when used in place of an Android Device connected to a REV Expansion Hub.

REV Expansion Hub – An integrated electronic device with four (4) DC motor channels, six (6) servo channels, eight (8) digital I/O channels, four (4) analog input channels, and four (4) independent I²C buses.

REV SPARK Mini Motor Controller - An electronic device that accepts a PWM control signal (from a servo controller) and supplies 12V power to a DC motor.
REV Robotics Sensors – Sensors designed by REV Robotics that connect to a REV Control or Expansion Hub.

REV Servo Power Module – An electronic device that boosts the power supplied to 3-wire servos. A REV Servo Power Module has 6 input servo ports and 6 matching output ports. It draws power from a 12V source and provides 6V power to each output servo port. A REV Servo Power Module can provide up to 15A of current across all output servo ports for a total of 90 Watts of power per module.

Robot Controller – An allowed Android Device connected to a REV Expansion Hub or REV Control Hub located on the Robot that processes Team written software, reads on-board sensors, and receives commands from the Drive Team by way of the Driver Station. The Robot Controller sends instructions to the motor and servo controllers to make the Robot move.

UVC Compatible Camera – A USB Video Class (UVC) Compatible Camera is a digital camera that conforms to the USB Video Class specification.

7.3 Robot Rules
Anyone that has attended a FIRST Tech Challenge Tournament knows that Teams think outside the kit-of-parts to create unique and creative Robots. The intent of the Robot construction rules is to create a level playing field and a framework for Teams to build Robots that safely play the annual game challenge. Teams should read all the Robot rules before building their Robot. Teams can also reference our Legal and Illegal Parts List on our website for common legal and illegal Robot parts. Some suppliers’ websites may claim that a part is FIRST Tech Challenge approved. The only official references for the legality of parts and materials are the Game Manual Part 1, the Legal and Illegal Parts List, and the Official Game Q&A Forum.

7.3.1 General Robot Rules
It is the intent of FIRST to encourage creativity in design as long as it does not present a safety hazard or unfairly affect the opportunities of any Teams to compete. Although there is significant creative freedom allowed in the Robot design rules, Teams should consider the adverse effects of any design decisions that they make. When considering your Robot design and your game strategy, ask yourself the following questions. If the answer to any of these questions is yes, the design part is not allowed:

- Could it damage or disable another Robot?
- Could it damage the Playing Field?
- Could it injure a participant or volunteer?
- Is there already a rule that restricts this?
- If everybody did this, would the gameplay be impossible?

<RG01> Illegal Parts - The following types of mechanisms and parts are not allowed:

a. Those used in a Robot drive system that could potentially damage the Playing Field and/or Scoring Elements such as high traction wheels (for example, AM-2256) and high grip tread (for example, Rough top).

b. Those that could potentially damage or flip other competing Robots.

c. Those that contain hazardous materials such as mercury switches, lead, or lead containing compounds, or lithium polymer batteries (except for the Android Devices’ internal batteries).

d. Those that pose an unnecessary risk of entanglement.

e. Those that contain sharp edges or corners.

f. Those that contain animal-based materials (because of health and safety concerns).

g. Those that contain liquid or gel materials.
h. Those that contain materials that would cause a delay of game if released (for example, loose ball bearings, coffee beans, etc.).

i. Those that are designed to electrically ground the Robot frame to the Playing Field.

j. Closed gas devices (for example, gas storage vessel, gas spring, compressors, etc.).

k. Hydraulic devices.

l. Vacuum based mechanisms.

<RG02> Maximum Starting Size - The maximum size of the Robot for starting a Match is 18 inches (45.72 cm) wide by 18 inches (45.72 cm) long by 18 inches (45.72 cm) high. A Robot Sizing Tool will be used as the official gauge to make sure Robots comply with this rule. To pass inspection a Robot must fit within the sizing tool while in its Match start configuration without exerting force on the sides or top of the sizing tool. Robots may expand beyond the starting size constraint after the start of the Match. Preloaded game elements may extend outside the starting volume constraint.

The Robot must be self-supporting while in the Robot Sizing tool by either:

a. A mechanical means with the Robot in a power-OFF condition. Any restraints used to maintain starting size (that is, zip ties, rubber bands, string, etc.) must remain attached to the Robot for the entire Match.

b. A Robot Initialization Routine in the Autonomous Op Mode that may pre-position the servo motors, with the Robot powered on, to the desired stationary position.

If the Robot Initialization routine moves the servos when a program is executed, there must be an indication label on the Robot. A warning label placed near the Robot's main power switch is required. Attach the image (“WARNING! - Robot moves on Initialization”) to your Robot near the Robot main power switch if servos are commanded to move during the initialization routine. To be easily seen by field personnel the label should be at least 1 in x 2.63 in (2.54 cm x 6.68 cm, Avery Label # 5160) and placed on a flat surface (not wrapped around corners or cylinders).:

<RG03> Robot Controller Mount – It is recommended that the Robot Controller be accessible and visible by field personnel. If a Team’s Robot Controller is not accessible or visible to field personnel, the Team may not receive adequate support from the field personnel.

The Robot Controller Android Device should be mounted so the display screen is protected from contact with the Playing Field elements and other Robots. This and other electrical parts (for example, batteries, motor and servo controllers, switches, sensors, wires) make poor bumpers and are unlikely to survive Robot-to-Robot contact during gameplay.

Important Note: The Robot Controller contains a built-in wireless radio that communicates with the Android Device in the Driver Station. The Robot Controller should not be obscured by metal or other material that could block or absorb the radio signals from the Robot Controller.

<RG04> Team Number Display - Robots must prominently display their Team number (numerals only, for example “12345”) on two separate signs.
a. The judges, referees, and announcers must be able to easily identify Robots by Team number.

b. Team number must be visible from at least two opposite sides of the Robot (180 degrees apart).

c. The numerals must each be at least 2.5 inches (6.35 cm) high and in a contrasting color from their background.

d. Team numbers must be robust enough to withstand the rigors of Match play. Example robust materials include: 1) self-adhesive numbers (mailbox or vinyl numbers) mounted on polycarbonate sheet, wood panel, metal plate, etc. or 2) Ink jet or laser printed numbers on paper and laminated.

<RG05> Alliance Marker – Robots must include a Team supplied, Alliance specific marker on two opposite sides of the Robot to easily identify which Alliance a Robot is assigned to. The Alliance marker must be displayed on the same side of the Robot as the Team number, within a 3" distance of the number. The Alliance marker must be visible to the referees during a Match.

a. The red Alliance marker must be a solid red square, 2.5 inches x 2.5 inches (6.35 cm x 6.35 cm) +/- 0.25 inches (0.64 cm).

b. The blue Alliance marker must be a solid blue circle, 2.5 inches (6.35 cm) +/- 0.25 inches (0.64 cm) in diameter.

c. Both Alliance markers must be removeable in order to swap them between Matches.

d. The Alliance marker must be robust enough to withstand the rigors of Match play. Example robust materials include: 1) Alliance marker template printed and laminated; 2) mounted on polycarbonate sheet, wood panel, metal plate, etc.

The intent of this rule is to allow easy identification of the Robot and their Alliance to field personnel. Alliance flags will no longer be provided by Tournament directors. A template for Teams is located on our website.

<RG06> Allowed Energy Sources - Energy used by FIRST Tech Challenge Robots (that is, stored at the start of a Match), shall come only from the following sources:

a. Electrical energy drawn from approved batteries.

b. A change in the position of the Robot center of gravity.

c. Storage achieved by deformation of Robot parts. Teams must be careful when incorporating spring-like mechanisms or other items to store energy on their Robot by means of part or material deformation.

<RG07> Launching Robot Parts - Parts of the Robot itself may not be launched (i.e. able to move independently of the Robot), even if the part that is launched is still connected to the Robot by a tether (for example, wire, rope, or cable).

<RG08> Launching Game Scoring Elements – Robots can launch (i.e. able to move independently of the Robot) scoring elements through the air unless limited by a game specific rule. Teams must only launch the elements with enough velocity to score. Launching elements with excessive velocity could create a safety hazard for other Teams and field personnel. If the referees feel that a Robot is launching scoring elements with excessive velocity, the Robot must be re-inspected. Robots must then show that a launched scoring element cannot travel in the air more than a 16 ft. (4.88 m) distance or more than 5 ft. (1.52 m) in elevation.
7.3.2 Robot Mechanical Parts and Materials Rules

<RM01> Allowed Materials - Teams may use raw and post-processed materials to build their Robots, provided these materials are readily available to all Teams (for example, McMaster-Carr, Home Depot, Grainger, AndyMark, TETRIX/PITSCO, MATRIX/Modern Robotics, REV Robotics, etc.).

- Sheet goods
- Extruded shapes
- Metals, plastics, wood, rubber, etc.
- Magnets

Examples of allowed post-processed materials are:
- Perforated sheet and diamond plate
- Injection molded parts
- 3D printed parts
- Cable, string, rope, filament, etc.
- Springs of all types: compression, extension, torsion, surgical tubing, etc.

<RM02> Commercial Off-The-Shelf Parts - Teams may use Commercial Off-The-Shelf (COTS) mechanical parts that have a single degree of freedom. For the FIRST Tech Challenge, a single degree of freedom part uses a single input to create a single output. The following are examples of single degree of freedom parts:

- Linear Actuator: a single rotary input results in a single direction linear output
- Pulley: rotates around a single axis
- Single Speed Gearbox: a single rotary input results in a single rotary output

It is the intent of FIRST to encourage Teams to design their own mechanisms rather than buying pre-designed and pre-manufactured solutions to achieve the game challenge. Purchased mechanism kits (for example, grippers) that violate the single degree of freedom rule, either assembled or requiring assembly, are not allowed. COTS drive chassis (for example, AndyMark TileRunner, REV Robotics Build Kit) are allowed provided none of the individual parts violate any other rules. Holonomic wheels (omni or mechanum) are allowed.

Examples of allowed COTS parts:
- Linear Slide Kit
- Linear Actuator kit
- Single Speed (non-shifting) gearboxes
- Pulley
- Lazy Susan
- Lead screws

Examples of illegal multiple degrees of freedom parts:
- Gripper assemblies or kits
- Ratcheting wrenches

<RM03> Modifying Materials and COTS Parts - Allowed materials and legal COTS parts may be modified (drilled, cut, painted, etc.), as long as no other rules are violated.
<RM04> **Allowed Assembly Methods** - Welding, brazing, soldering, and fasteners of any type are legal methods for assembling a Robot.

<RM05> **Lubricant** - Any COTS lubricant is allowed, if it doesn’t contaminate the Playing Field, scoring elements or other Robots.

### 7.3.3 Robot Electrical Parts and Materials Rules

There are many possible ways to build and wire a Robot. These rules provide specific requirements on what is and is not allowed. Teams must ensure that electrical and electronic devices are used consistently with manufacturer’s requirements and specifications. Teams are encouraged to review the FIRST Tech Challenge Robot Wiring Guide for suggestions on how to build a Robot with safe and reliable wiring.

#### <RE01> Main Power Switch

The Robot Main Power Switch must control all power provided by the Robot main battery pack. FIRST requires Teams to use either the TETRIX (part # W39129), MATRIX (part # 50-0030), or REV (REV-31-1387) power switch. This is the safest method for Teams and field personnel to shut down a Robot.

The Robot main power switch must be mounted or positioned to be readily accessible and visible to field personnel. A Main Robot Power label must be placed near the Main Power Switch of the Robot. Attach the image (“POWER BUTTON”) to your Robot near the Main Power Switch. To be easily seen by field personnel the label should be at least 1 in x 2.63 in (2.54 cm x 6.68 cm, Avery Label # 5160) and placed on a flat surface (not wrapped around corners or cylinders).

Note: There are similar looking batteries available from multiple sources, but the ONLY legal batteries are those listed above.

#### <RE02> Battery Mount

Batteries must be securely attached (for example, VELCRO, zip tie, rubber band) to the Robot in a location where they will not make direct contact with other Robots or the Playing Field. Batteries should be protected from contact with sharp edges and protrusions (screw heads, screw ends, etc.)

#### <RE03> Robot Main Battery

All Robot power is provided by exactly one (1) 12V Robot main battery. Only one (1) of the approved battery packs is allowed on the Robot.

The only allowed Robot main power battery packs are:

- a. TETRIX (W39057, formally 739023) 12V DC battery pack
- b. Modern Robotics/MATRIX (14-0014) 12V DC battery pack
- c. REV Robotics (REV-31-1302) 12V DC Slim Battery pack

#### <RE04> Fuses

Fuses must not be replaced with fuses of higher rating than originally installed or according to manufacturer's specifications; fuses may not be shorted out. Fuses must not exceed the rating of those closer to the battery. If necessary, a fuse may be replaced with a smaller rating. Replaceable fuses must be single use only; self-resetting fuses (breakers) are not allowed.
<RE05> **Robot Power** - *Robot* power is constrained by the following:

a. Allowed electronic devices may only be powered by power ports on the REV Expansion Hub or REV Control Hub except as follows:
   
i. The REV Expansion Hub and REV Control Hub are powered by the Robot main battery.

   ii. REV SPARK Mini Motor Controllers are powered by the Robot main battery.

   iii. Allowed sensors connected to the REV Expansion Hub or REV Control Hub.

   iv. Light sources per <RE13>.

   v. Video cameras per <RE14>.

   vi. REV Servo Power Module

b. The Robot Controller Android Device must be powered by its own internal battery or by the built-in charging feature of the REV Expansion Hub; external power is not allowed.

<RE06> **Robot Controller** – Exactly one (1) Robot Controller is required. An optional REV Expansion Hub may be also be added.

<RE07> **Android Devices** - The following Android Devices are allowed:

a. Motorola Moto G 2nd Generation

b. Motorola Moto G 3rd Generation

c. Motorola Moto G4 Play (4th Generation)/Motorola Moto G4 Play*

d. Motorola Moto G5

e. Motorola Moto G5 Plus

f. Motorola Moto E4 (USA versions only, includes SKUs XT1765, XT1765PP, XT1766, and XT1767)

g. Motorola Moto E5 (XT1920)

h. Motorola Moto E5 Play (XT1921)

No other Android Devices may be used as Robot Controllers or Driver Stations. See Rule <RS03> for the approved list of Android Operating System versions.

An Android Device Robot Controller USB interface may only connect to a REV Expansion Hub, or a USB hub.

*The Motorola Moto G4 Play may be sold as either Motorola Moto G Play (4th gen)*, or “Motorola Moto G4 Play”. Either phone is acceptable however FIRST Tech Challenge highly recommends that Teams purchase either model number XT1607 or XT1609, as these are the US versions and have been tested and are fully compatible with the FIRST Tech Challenge software. Teams that have purchased phones with model numbers XT1601, XT1602, XT1603, or XT1604 may continue to use these phones as legal, however there is a potential for issues with these phones not being fully compatible with the software.

<RE08> **Control Module Quantities** - The Control Module consists of one of the following:

a. A REV Control Hub; or
b. An allowed Android Device connected to a REV Expansion Hub

In addition to “a” or “b” above, you may add:

c. No more than one additional REV Expansion Hub
d. Any quantity of REV SPARK Mini Motor Controllers
e. Any quantity of REV Servo Power Modules

<RE09> Motor and Servo Controllers – The only allowed Motor and Servo Controllers are: REV Expansion Hub, REV Control Hub, REV Servo Power Module, REV SPARK Mini Motor Controller, and VEX Motor Controller 29.

<RE10> DC Motors – A maximum of eight (8) DC motors are allowed in any combination. The only allowed motors are:

a. TETRIX 12V DC Motor
b. AndyMark NeveRest series 12V DC Motors
c. Modern Robotics/MATRIX 12V DC Motors
d. REV Robotics HD Hex 12V DC Motor
e. REV Robotics Core Hex 12V DC Motor

No other DC motors are allowed.

<RE11> Servos – A maximum of twelve (12) servos are allowed. Any servo that is compatible with the attached servo controller is allowed. Servos may only be controlled and powered by a REV Expansion Hub, REV Control Hub, or REV Servo Power Module. Servos may be rotary or linear but are limited to 6V or less and must have the three-wire servo connector.

The VEX EDR 393 motor is considered a servo. It must be used in conjunction with a VEX Motor Controller 29 and a REV Servo Power Module. A maximum of two (2) VEX EDR 393 Motors per REV Servo Power Module is allowed.

<RE12> Sensors - Sensors are subject to the following constraints:

a. Compatible sensors from any manufacturer may be connected to the REV Expansion Hub or REV Control Hub.

b. Compatible sensors from any manufacturer may be connected to the Logic Level Converter and/or the F C Sensor Adapter Cable. Refer to Rule <RE15.j> for details on the use of Logic Level Converter and the F C Sensor Adapter Cable.

c. Passive electronics may be used as recommended by sensor manufacturers at the interfaces to the sensors.

d. Voltage sensors are allowed; except on an output port of a motor or servo controller.

e. Current sensors are allowed; except on an output port of a motor or servo controller.

f. Simple F C multiplexers are allowed and they may only be connected to and powered from the F C connections available on REV Expansion Hub or REV Control Hub.
g. Voltage and/or current sensors are also allowed to connect between the battery pack and the REV Expansion Hub or REV Control Hub.

<RE13> Light Sources - Functional and/or decorative light sources (including LEDs) are allowed with the following constraints:

a. Focused or directed light sources (for example: lasers and mirrors) are not allowed except for the REV Robotics 2m Distance sensor (REV-31-1505).

b. Light-source control by compatible ports on the REV Expansion Hub or REV Control Hub is allowed.

c. Commercial Off the Shelf (COTS) interface modules (without user programmable microprocessors) are allowed between the light source and the components listed in <RE13>b.

d. The only approved power sources for lights are as follows:

   i. Internal (as supplied by the Commercial Off the Shelf manufacturer) battery pack or battery holder.

   ii. REV Expansion Hub or REV Control Hub Motor-control ports, spare XT30 ports, 5V auxiliary power ports, and I2C sensor ports.

The common rates to trigger seizures is between 3 and 30 hertz (flashes per second), but varies from person to person. While some people are sensitive to frequencies up to 60 hertz, sensitivity under 3 hertz is not common. Please keep in mind that event attendees could have sensitivities to flashing lights.

Teams that choose to install flashing lights should ensure the lights can be turned either completely off or on (not flashing). Tournament directors have the discretion of asking Teams to turn their lights to either state if an event attendee or participant has a sensitivity to flashing lights.

Teams may still use LED lights to signal events provided the flash rate is approximately 1 hertz or less (e.g. cannot change states more frequently than approximately once a second). For example:

- Teams may signal via LED light that they have a scoring element ready.

<RE14> Video Cameras

a. Self-contained video recording devices (GoPro or similar) are allowed providing they are used only for non-functional post-Match viewing and the wireless capability is turned off. Approved self-contained video cameras must be powered by an internal battery (as supplied by the manufacturer).

b. UVC Compatible Cameras are allowed for computer vision-related tasks. It is recommended that UVC Compatible Cameras be connected directly to a REV Control Hub, or through a powered USB hub that is in turn connected to an Android Device Robot Controller through an OTG adapter.

See https://www.epilepsysociety.org.uk/photosensitive-epilepsy#.XuJbwy2ZPsE accessed on 7/10/2020
<RE15> **Robot Wiring** - Robot wiring is constrained as follows:

a. USB surge protectors connected to USB cables are allowed.

b. Ferrite chokes (beads) on wires and cables are allowed.

c. A *Mini USB to OTG (On-The-Go) Micro Cable* or any combination of a *Mini USB cable*, a *USB hub*, and an *OTG Micro Adapter* may be used to connect the *Robot Controller* *Android Device* to the *Robot* electronics. Note that the *OTG Micro Adapter* may be integrated into the USB hub. These devices may connect to the *Robot* electronics in the following ways:
   
i. Built-in USB input port of the *REV Expansion Hub* or *REV Control Hub*, or
   
   ii. A USB hub that connects to the built-in USB input port of the *REV Expansion Hub* or *REV Control Hub*. If a powered hub is used, it must draw its energy from either
      
i. A commercial USB battery pack, or
      
ii. A 5V auxiliary power port on a *REV Expansion Hub* or *REV Control Hub*.

d. Anderson Powerpole, and similar crimp or quick-connect style connectors are recommended for joining electrical wires throughout the *Robot*. Power distribution splitters are recommended where appropriate to reduce wiring congestion. All connectors and distribution splitters should be appropriately insulated.

e. Installed connectors (such as battery-pack connectors, battery charger connectors) may be replaced with Anderson Powerpole or any compatible connector.

f. Power and motor control wires must use consistent color-coding with different colors used for the positive (red, white, brown, or black with a stripe) and negative/common (black or blue) wires.

g. Wire and cable management products of any type are permitted (for example, cable ties, cord clips, sleeving, etc.).

h. Wire insulation materials of any type are permitted when used to insulate electrical wires or secure motor control wires to motors (for example, electrical tape, heat shrink, etc.).

i. Power, motor control, servo, encoder, and sensor wires and their connectors may be extended, modified, custom made, or COTS subject to the following constraints:
   
i. Power wires are 18 AWG or larger.
   
ii. Motor control wires as follows:
      
i. 22 AWG or larger for TETRIX Max 12V DC motors and REV Robotics Core Hex (REV-41-1300) 12V DC motors
      
ii. 18 AWG or larger for all other 12V DC motors
      
iii. PWM (servo) wires are 22 AWG or larger.
iv. Sensor wires should be the same size or larger than the original wiring.

Teams should be prepared during Robot inspection to show documentation confirming the wire gauges used; particularly for multi-conductor cables.

j. Logic Level Converters – Logic Level Converters that are used to connect a REV Expansion Hub or REV Control Hub to a 5V-compatible I²C sensor or a 5V-compatible digital sensor are allowed. Exactly one Logic Level Converter per I²C device and one Logic Level Converter per digital sensor are allowed. A Logic Level Converter should only draw power from the REV Expansion Hub or REV Control Hub.

k. Electrically grounding the Control System electronics to the frame of the Robot is recommended and only permitted using a FIRST-approved, commercially manufactured Resistive Grounding Strap. The only Resistive Grounding Strap approved for use is the REV Robotics Resistive Grounding Strap (REV-31-1269). Teams that have electronics with Powerpole-style connectors may also use the REV Robotics Anderson Powerpole to XT30 Adapter (REV-31-1385) in conjunction with the REV Robotics Resistive Grounding Strap. No other grounding straps or adapters are permitted. For additional details on installation of the grounding strap or adapter, please see the Robot Wiring Guide.

<RE16> Modifying Electronics - Approved electrical and electronic devices may be modified to make them more usable; they may not be modified internally or in any way that affects their safety.

Examples of modifications that are allowed:

- Shortening or extending wires
- Replacing or adding connectors on wires
- Shortening motor shafts
- Replacing gearboxes and/or changing gears

Examples of modifications that are not allowed:

- Replacing an H-Bridge in a motor controller
- Rewinding a motor
- Replacing a fuse with a higher value than specified by the manufacturer
- Shorting out a fuse
- Changing internal servo components to convert a limited rotation angle servo to a continuous rotation servo or the reverse conversion.

<RE17> Driver Station Constraints – Teams provide their own Driver Station and it must comply with the following constraints:

a. The Driver’s Station must consist only of:

   i. One (1) Android Device
   ii. One (1) OTG Cable
   iii. No more than one (1) USB hub
   iv. No more than one (1) COTS USB external battery
   v. No more than two (2) gamepads
   vi. Any components used to hold the above listed legal devices.
b. The *Driver Station Android Device* USB interface may only connect to either:
   i. A Mini *USB to OTG* (On-The-Go) cable or combination of cables connected to a USB Hub, or
   ii. One (1) gamepad, USB cable, and an *OTG Micro Adapter*.

c. One optional COTS USB external battery connected to the USB Hub to charge the *Android Device* is allowed.

d. The only allowed gamepads are listed below. They may be used in any combination.
   i. Logitech F310 gamepad (Part# 940-00010)
   ii. Xbox 360 Controller for Windows (Part# 52A-00004)
   iii. Sony DualShock 4 Wireless Controller for PS4 (ASIN # B01LWVX2RG) operating in wired mode only (i.e., connected through USB 2.0 Type A to Type B Micro cable with Bluetooth turned off)
   iv. Etpark Wired Controller for PS4 (ASIN # B07NYVK9BT) The touch display screen of the *Driver Station* must be accessible and visible by field personnel.

e. The touch display screen of the *Driver Station* must be accessible and visible by field personnel.

**Important Note:** The *Driver Station* is a wireless device with a built-in wireless radio. During a *Match*, the *Driver Station* should not be obscured by metal or other material that could block or absorb the radio signals from the *Driver Station*.

<RE18> **Additional Electronics** – Electronic devices that are not specifically addressed in the preceding rules are not allowed. A partial list of electronics that are not allowed includes: Arduino boards, Raspberry Pi, relays, and custom circuits.

7.3.4 **Robot Software Rules**

<RS01> **Device Names** - Each *Team* MUST “name” their *Robot Controller* with their official FIRST Tech Challenge *Team* number and –RC (for example, “12345-RC”). Each *Team* MUST “name” their *Driver Station* with their official *Team* number and –DS (for example, 12345-DS). *Teams* with more than one *Driver Station* or *Robot Controller Android Device* must name these devices with the *Team* number followed by a hyphen then a letter designation beginning with “A” (for example, “12345-A-RC”, “12345-B-RC”).

<RS02> **Recommended Programming Tools** - The following tools are recommended for use in the FIRST Tech Challenge:

a. FTC Blocks Development tool – a visual, blocks-based programming tool hosted by the *Robot Controller*.

b. FTC OnBot Java Programming tool – a text-based integrated development environment hosted by the *Robot Controller*.

c. Android Studio – a text-based integrated development environment.

d. Java Native Interface (JNI) & Android Native Development Kit (NDK) – *Teams* can incorporate native code libraries into their apps using the JNI framework and the Android NDK.
<RS03> Allowed Software System Versions - The following table lists the Android Devices, minimum Android versions, minimum operating system and firmware versions, and minimum FTC software versions allowed per device.

<table>
<thead>
<tr>
<th>Device</th>
<th>Minimum Android Version</th>
<th>Minimum FTC Software Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>Motorola Moto G 2nd Generation</td>
<td>6.0 (Marshmallow)</td>
<td></td>
</tr>
<tr>
<td>Motorola Moto G 3rd Generation</td>
<td>6.0 (Marshmallow)</td>
<td></td>
</tr>
<tr>
<td>Motorola Moto G4 Play (4th Generation) / Moto G4 Play (See &lt;RE06&gt; for details)</td>
<td>7.0 (Nougat)</td>
<td>6.0</td>
</tr>
<tr>
<td>Motorola Moto G5</td>
<td>7.0 (Nougat)</td>
<td></td>
</tr>
<tr>
<td>Motorola Moto G5 Plus</td>
<td>7.0 (Nougat)</td>
<td></td>
</tr>
<tr>
<td>Motorola Moto E4 (USA versions only, includes SKUs XT1765, XT1765PP, XT1766, and XT1767)</td>
<td>7.0 (Nougat)</td>
<td></td>
</tr>
<tr>
<td>Motorola Moto E5 (XT1920)</td>
<td>7.0 (Nougat)</td>

<td>O/S Version 1.1.1</td>
<td>6.0</td>
</tr>
<tr>
<td>REV Expansion Hub</td>
<td>Firmware version 1.8.2</td>
<td></td>
</tr>
</tbody>
</table>

Note: The REV Hardware Client Software is used to install firmware and Operating Systems onto the REV Hubs. Its minimum version number is 1.0.0.

IMPORTANT: Rules <RS02> or <RS03> do not require that Teams upgrade to the latest version of the software. A mandatory upgrade (announced by FIRST) would only be required if FIRST determined there was a critical software fix that must be adopted by Teams. Teams must install the upgrade before the time of competition. Additionally, beta versions of the software are allowed at official tournaments. Mandatory upgrades will be communicated in the following ways:

- Via Team Blast – The mandatory upgrade and version number will be communicated to Teams on the Team Blast, which will also show the date the required upgrade must be made.
- Online – The minimally required software will be listed on our Technology Resources page, with the date Teams are required to make the mandatory software upgrade.
- Forum – The minimally required software will be listed in the Technology Forum page, with the date Teams are required to make the mandatory software upgrade.

Templates for all programming choices are available through the links located at http://www.firstinspires.org/node/5181.

<RS04> Autonomous to Driver-Controlled Transition - Teams that expect to operate their Robot during the Autonomous period must demonstrate during Field Inspection the Driver Station switches the Robot Controller between Autonomous mode and Driver-Controlled mode.

<RS05> Robot Controller App - The Robot Controller Android Device (if used) must have a designated “FTC Robot Controller” app that is the default application for the REV Expansion Hub. The Robot Controller App
must not be installed on the Driver Station Android Device.

<RS06> Driver Station App – Teams must install the official “FTC Driver Station” app onto their Driver Station Android Device and use this app to control their Robot during a Match. The Driver Station software version number must match the version number of the Robot Controller app. The Driver Station App must not be installed on the Robot Controller Android Device.

<RS07> Android Device and REV Control Hub Operating System Settings - The Robot Controller and Driver Station must be set to:

a) Airplane mode must be turned on (does not apply for Teams using the REV Control Hub).
b) Bluetooth must be turned off
c) Wi-Fi must be turned on.
d) REV Control Hub password must be different than the factory default value of “password.”

<RS08> Software Modification -
a) Teams are not allowed to modify the FIRST Tech Challenge Driver Station App in any fashion.
b) Teams are required to use the FIRST Robot Controller SDK, and are not allowed to remove, replace, or modify the portions of the SDK which are distributed as binary .AAR files.

The intent of this rule is for Teams to download the official version of the SDK from FIRST and make modifications to add Team created code.

Reengineered, reverse engineered, or modified versions of the official FIRST SDK are not allowed.

<RS09> Driver Station Communication - Communication between the Robot and Driver Station is only allowed via the Robot Controller and Driver Station applications.

Communication between the Robot Controller and the Driver Station is limited to the unmodified mechanisms provided by the official FIRST Tech Challenge (FTC) software, which consists of the official FTC Software Development Kit (SDK), the FTC Robot Controller app, and the FTC Driver Station app. Teams are not permitted to stream audio, video or other data using third-party software or modified versions of the FTC software. Teams may only use the unmodified telemetry feature included with the FTC software to transfer additional data between the Robot Controller and the Driver Station. Software that is preinstalled by an approved phone’s manufacturer and cannot be disabled is exempt from this constraint.

During a Match, a Team’s Robot Controller and a Team’s Driver Station are not allowed to be connected wirelessly to any other device besides each other.

8.0 Robot Inspection

8.1 Description
Teams are highly recommended to conduct a Robot and Field self-inspection prior to competing. These inspections will ensure that all Robot rules and regulations are met. The official “Robot & Field Inspection Checklists” are located in Appendices B and C.
9.0 Judging and Award Criteria

9.1 Overview
This section provides descriptions of:

- Engineering Notebook Requirements and Recommendations
- Engineering Portfolio Requirements and Recommendations
- How Judging Works
- FIRST Tech Challenge Award Criteria

Teams have spent a significant number of hours designing, building, programming their Robot, and learning what it takes to be part of a Team. For many Teams, the event is the reward for all their hard work throughout the season. While there are several types of events, they all offer a fun and exciting way for Teams to show the results of their efforts.

The judged awards give us the opportunity to recognize Teams who embody important values like Gracious Professionalism®, teamwork, creativity, innovation, and the value of the engineering design process. These judging guidelines are a part of the road map to success.

FIRST Tech Challenge provides Judging feedback for teams who submit a completed Judging Feedback Request form. When receiving feedback, Teams should note that the judging is a subjective process; and students are encouraged to learn the important life skill of self-evaluation to help them prepare for their Judged Interview. This helps students prepare for professional interviews while developing other real-world life skills. For a copy of the FIRST Tech Challenge team Judging Session Self-Reflection Sheet please visit the website: http://www.firstinspires.org/node/5226

9.2 Engineering Notebook

9.2.1 Overview
This section describes the engineering notebook.

9.2.2 What is an Engineering Notebook?
One of the goals of FIRST and FIRST Tech Challenge is to recognize the engineering design process and “the journey” that a team makes in the phases of creating their robot, including:

- Problem Definition
- Information Gathering
- Brainstorming Solutions
- Concept Design
- System Level Design
- Testing
- Design Improvement
- Production
- Promotion
- Budgeting
- Planning
- Outreach

Throughout the process of building and designing a Robot, Teams will draw ideas on paper, encounter obstacles, and learn valuable lessons. This is where teams will use an engineering notebook. These notebooks follow the Team from kickoff throughout the competitions.
The Engineering Notebook is an optional item but is a fundamental source of information for the team to use to be able to create the Engineering Portfolio.

Judges may ask the team for their engineering notebook to better understand the journey, design, and Team and to get more details and background than would be in the team’s Engineering Portfolio.

The engineering notebook is the documentation repository of the Team, outreach and fund-raising efforts, Team plans, and the Robot design. This documentation can include sketches, discussions and team meetings, design evolution, processes, obstacles, and each Team member’s thoughts throughout the journey for the entire season.

In the FIRST Tech Challenge, engineering notebooks can include business planning, outreach goals and achievement, and a Team’s insights into what it is to be a FIRST Tech Challenge Team.

A new notebook must be created for each new season. Teams may consider their new season as beginning after their final event for the previous season.

### 9.2.3 Engineering Notebook Formats

Teams may choose to record their season with either handwritten or electronic documents. There is no distinction made between handwritten and electronic engineering notebooks during judging; each format is equally acceptable.

- **Electronic**: Teams may choose to use electronic programs to create their engineering notebook.
- **Handwritten**: Teams can choose to add handwritten text, drawings or cad drawings, but recognize that the team may need to scan (or take a picture) of each page.

For judging at a Remote Event, Teams should create a single file that is a sharable, non-editable version (such as a PDF) of their engineering notebook. Teams may be asked to upload their engineering notebook in the Remote Event Hub after the initial team interview is completed.

For judging purposes at a Traditional event, Teams should have a physical copy of their Engineering Notebook available in the team’s pit area for Judges to look at as needed.

### 9.2.4 Engineering Notebook Requirements

- The Team number must appear on the outside front cover of the engineering notebook. Engineering notebooks will not be considered without this information.

### 9.2.5 Engineering Notebook Recommendations

- We strongly recommend that a one-page Summary be included in the notebook near the front that connects the information from the Engineering Portfolio to the relevant section or pages in the Engineering Notebook. This will help the judges quickly find additional information relevant to the specific award(s).
- The engineering notebook could include:
  - Engineering content that includes the Robot design processes.

**A Team number on outside front cover makes it easy for Judges to know who created the Engineering Notebook they are reviewing. This is a required component of the Engineering Notebook.**
b. Team information that includes information about the Team and outreach activities.

c. A Team plan. This could be a business plan, a fund-raising plan, a strategic plan, a sustainability plan, or a skills development plan.

**9.2.6 Engineering Notebook Examples**

Scanned copies of engineering notebook examples are posted on the FIRST website. Teams are encouraged to look over these as great examples of what the judges will look for when reading through the engineering notebooks.

**9.3 Engineering Portfolio**

**9.3.1 Overview**

This section describes the requirements for creating the engineering portfolio, including formatting guidelines.

**9.3.2 What is an Engineering Portfolio?**

An Engineering Portfolio is a short and concise summary of the team’s Engineering Notebook.

Whereas the engineering notebook is a complete documentation of the Team, outreach and fund-raising efforts, Team plans, and the Robot design. The Engineering Portfolio should include sketches, discussions and team meetings, design evolution, processes, obstacles, goals and plans to learn new skills, and each Team member’s concise thoughts throughout the journey for the season, the Engineering Portfolio is like the Team’s CV or Resume.

**9.3.3 Engineering Portfolio Formats**

Teams may choose to document their summary portfolio with either handwritten or electronic documents. There is no distinction made between handwritten and electronic engineering portfolios during judging; each format is equally acceptable.

- **Electronic:** Teams may choose to use any electronic programs to create their engineering portfolio. For Remote Event judging, Teams must create a single file that is a sharable, online, non-editable version (such as a PDF) of their engineering Portfolio. For Traditional Events, Teams must print their Engineering Portfolio.

- **Handwritten:** Teams can choose to create a handwritten version but for Remote Judging Events, this is discouraged due to difficulties in scanning into a readable, sharable, online version.

**9.3.4 Engineering Portfolio Requirements**

- In order to be considered for Judged Awards, a team must submit an Engineering Portfolio.
- The total number of pages for an Engineering Portfolio must not exceed 15 pages, plus a cover sheet.
  - Pages must be the equivalent of Standard A sized paper (US 8.5 x 11) or Standard A4 sized paper (EU 210 x 297 mm).
  - Fonts used must be a minimum of 10 points
- The Control Award Submission Form is not a part of the Engineering Portfolio, and does not count in this total.
- The Team number must appear on the top of the front page of the engineering portfolio. Engineering portfolios will not be considered without this information.

A Team number on the top of every page makes it easy for Judges to know who created the Engineering Portfolio they are reviewing. The Team number on the front page is a required component of the Engineering Portfolio.

Judges may not need to reference your team’s Engineering Notebook. We expect that the higher the quality of information in the Engineering Portfolio, the less likely judges will need to reference the Team’s Notebook.
• Engineering Portfolio must be submitted in a PDF Format
• Engineering Portfolio may not include links to videos or other files.

9.3.5 Engineering Portfolio Recommendations
• We strongly recommend the Team number is at the top of each page.
• The Engineering Portfolio could include:
  a. Summary of the Engineering content that includes the Robot design processes.
  b. Summary of the Team information that includes information about the Team and outreach activities.
  c. Summary of the Team plan and information about the Team overall. The Team plan could be a business plan, a fund-raising plan, a strategic plan, a sustainability plan, or a plan for the development of new skills.

Teams can use the Self-Assessment sheet (coming soon!) as a way to be sure their Engineering Portfolio provides answers for each of the requirements for specific awards.

9.3.6 Engineering Portfolio Requirements by Award
The chart below provides a quick outline of the engineering notebook requirements by award:

<table>
<thead>
<tr>
<th>Engineering Portfolio Requirements by Award</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inspire Award</td>
</tr>
<tr>
<td>• Team must submit an engineering Portfolio. The engineering portfolio must include summary information about the Robot design, information about the Team, and a Team plan. The entire engineering portfolio must be high quality, thoughtful, thorough, concise and well-organized. The team should have an engineering notebook available for the judges to review that provides the detailed information to support the information in the Portfolio.</td>
</tr>
<tr>
<td>Think Award</td>
</tr>
<tr>
<td>• Engineering Portfolio must have engineering content. The engineering content could include entries describing examples of the underlying science, mathematics, and game strategies in a summary fashion.</td>
</tr>
<tr>
<td>• The engineering Portfolio must provide examples that show the Team has a clear understanding of the engineering design process including examples of lessons learned.</td>
</tr>
<tr>
<td>• The portfolio should inspire the judges to want to see the detailed engineering content in the Engineering Notebook.</td>
</tr>
<tr>
<td>• Portfolio format is less important but enables the judges to understand the team’s design maturity, organizational capabilities and overall team structure.</td>
</tr>
<tr>
<td>• Portfolio could reference specific experiences and lessons learned but should capture the summary of the current status of the Team and their robot design.</td>
</tr>
<tr>
<td>• Portfolio could also summarize experiences and lessons learned from outreach with concise tables of outcomes</td>
</tr>
<tr>
<td>• Portfolio could also summarize how they acquired new mentors and/or acquired new knowledge and expertise from their mentors</td>
</tr>
<tr>
<td>• Portfolio could contain summary of overall Team Plan.</td>
</tr>
</tbody>
</table>
Portfolio could contain information about the plans to develop skills for team members.
Portfolio could be organized in a logical manner.

**Connect Award**
- *Team* must submit an engineering portfolio.
- Portfolio must include a Team plan that covers the Team’s goals for the development of team member skills, and the steps the team has or will take to reach those goals. Examples of what the plan could include are timelines, outreach to science, engineering, and math communities, and training courses.
- Portfolio must include a summary of how they acquired new mentors or acquired new knowledge and expertise from their mentors.

**Collins Aerospace Innovate Award**
- *Team* must submit an engineering portfolio.
- The engineering portfolio must include examples of the team’s engineering content that illustrate how the *Team* arrived at their design solution.
- The portfolio should inspire the judges to want to see the detailed engineering content in the Engineering Notebook.

**Control Award, sponsored by Arm, Inc.**
- The Team must submit an engineering portfolio. The engineering portfolio must include engineering content that documents the control components.
- The Team must submit a Control Award submission form as a separate document. Teams should identify the control aspects of their robot that they are most proud of, and should not exceed 2 pages.

**Motivate Award**
- *Team* must submit an engineering portfolio.
- The engineering portfolio must include a Team organization plan, which could describe their future goals and the steps they will take to reach those goals. Examples of what the plan could include are team identity, fund-raising goals, sustainability goals, timelines, outreach to non-technical groups, finances, and community service goals.
- The Team is an ambassador for FIRST programs.
- Team can explain the individual contributions of each team member, and how these apply to the overall success of the team.

**Design Award**
- Team must submit an engineering portfolio that includes examples of Robot CAD images or detailed Robot design drawings.
- The portfolio should inspire the judges to want to see the detailed design content and design journey in the Engineering Notebook.

### 9.4 Judging Process, Schedule, and Team Preparation
The schedules at the FIRST Tech Challenge Tournaments may vary from site to site. At traditional events, judging interviews are scheduled for before the start of match play. For Remote events, Judging will take place during a pre-determined window of time. Exact times for both the matches and meeting with judges cannot be given within this manual. All *Teams* receive the schedule before or during check-in at the competition, or in advance of their scheduled remote interview.
9.4.1 How Judging Works

At FIRST Tech Challenge tournaments, there will be four parts to the judging process:

1. Interview with the judges.
   a. Teams take part in scheduled, private interviews with a panel of two or more judges.
   b. Teams are asked to bring their Robot to the judge interview. This is the best chance for teams to explain and show their robot design to the judges in a quiet and relaxed environment. For remote events, Teams should take photos of their robot to show their robot to the Judges as a part of their remote interview.
   c. The interview will last at least 10 minutes.
   d. During the first 5 minutes of the interview, Teams have the opportunity to present to the Judges, without interruption. Teams are not required to prepare a presentation and will not be penalized if they do not have a prepared presentation. Teams will not receive more than 5 minutes for their uninterrupted presentation.
   e. At the five-minute mark, the Judges will begin to ask questions of the Team.

2. Evaluation of Robot performance at traditional events.

3. Judges follow up with additional interviews in the pits during competition. For remote events, this second interview will be pre-scheduled.

4. Evaluation of the engineering portfolio.

No awards will be decided based on the judges interview alone. Judges use the guidelines provided in this section to assess each Team.

Teams should present their engineering portfolio, their control award submission form, and their judging feedback request form to the judges at the start of their interview unless otherwise directed by the tournament officials. In remote events, the Team coach will upload these materials using a link provided to them by the tournament director or local program delivery partner.

After the judges review the submitted engineering portfolio, complete the scheduled Team interviews, and evaluate the Robot performance, they meet to review their assessments and create a list of top candidates for the various judged awards. Judges may require more discussion with Teams.

9.4.1.1 Feedback to Teams

Teams who wish to receive feedback from judges must submit a completed judging feedback request form. Judges will conduct the Team interview and review the documentation submitted by the Team. After the event, the lead coach/mentor 1 for the Team will receive a judging feedback form which has been completed by the event judges via email.

The feedback form is completed by the judges immediately following the formal interview.

9.4.1.2 Teams Without a Robot

Teams who have not built a Robot or have a Robot that has not passed Robot inspection are permitted to participate in judging and are eligible for award consideration.

9.4.2 Judging Schedule

The judging interviews take place in a separate area or room away from other teams as well as the noise of the competition and pit. Teams follow the schedule that outlines Team interview times and locations. Sometimes, Teams may receive this information in advance, but more often, Teams will receive this information when they...
check-in on the morning of the event. For Remote events, Team Coaches will receive the team’s Judging Schedule in advance of the event.

As much as possible, Teams should familiarize themselves with where and how judging will occur and allow enough time to get there. We expect that all Teams arrive at the judge queuing area five minutes before their scheduled judging interview. This helps us keep the event running on time.

9.4.3 Team Preparation

Teams are encouraged to read and understand the award requirements for each award to assess where they are within an award category and help them establish higher goals. These guidelines are the same ones used by the judges during each tournament, and at the FIRST Tech Challenge World Championship Tournaments. Please see the Award Categories section of this manual for award requirements and look over the Engineering Portfolio Requirements by Award to ensure the Team’s engineering portfolio meets the criteria by award. Teams should attend judging workshops and judging practice days if they are available in their region. Practice makes for a better presentation, and practice in front of others could help a Team identify gaps in their presentation. Judging self-reflection sheets are another tool that Teams can use to prepare for their judging interview.

During the Team’s interview, the judges want to know highlights about the Team; what the Team learned during the competition season; and the experiences that were gained. Team representatives’ abilities to answer the questions or elaborate on Robot design functions or qualities are evaluated during the Team interview. Check with the tournament director to see if mentors and coaches can watch the Team interview. Mentors and coaches may not contribute to the judging interviews. Mentors and coaches should always keep in mind that FIRST Tech Challenge is a student-centered activity. It is about giving the students a unique and stimulating experience in all aspects of the program.

9.4.4 Video Award Submission Guidelines for Compass and Promote Awards

The submission process for this award may vary by tournament. The Compass and Promote awards are not offered at all events. Please check with the tournament director for details. Winning videos will be submitted to FIRST and used to promote the higher values of FIRST Tech Challenge. Teams can also send their Promote videos directly to FIRST; however, these submissions will not be formally judged. If you’d like to send your Promote video to FIRST, please email ftceams@firstinspires.org with the subject line “Promote Award Video”.

- The video must be submitted at least one week before tournament day. Instructions for submitting videos may vary from tournament to tournament. Please check with the tournament director for details.
- Videos must be submitted in AVI, WMV, MOV or better format. Submission through use of a streaming service such as YouTube is not acceptable. Remember the winning video may be shown on a large screen during the awards ceremony. Teams should use the best resolution available for the final version.
- Only one video submission per Team will be considered. Teams may submit new or updated videos at each tournament.
- Teams must have permission from the copyright owners for music used in the video and indicate this in their video.
9.5 Award Categories
Each award listed below has a list of non-negotiable requirements. Please note that each award has a set of required criteria. Gracious Professionalism® is listed as the first criteria for every award. This is a mandatory requirement for every FIRST Tech Challenge award. Teams who behave in an ungracious way are not eligible for consideration for any award at the event.

9.5.1 Inspire Award
This judged award is given to the team that best embodies the ‘challenge’ of the FIRST Tech Challenge program. The Team that receives this award is a strong ambassador for FIRST programs and a role model FIRST Team. This Team is a top contender for many other judged awards and is a gracious competitor. The Inspire Award winner is an inspiration to other Teams, acting with Gracious Professionalism® both on and off the playing field. This Team shares their experiences, enthusiasm and knowledge with other team, sponsors, their community, and the Judges. Working as a unit, this Team will have showed success in performing the task of designing and building a Robot.

Required criteria for the Inspire Award:

- Team shows respect and Gracious Professionalism® to everyone they meet at a FIRST Tech Challenge event.
- Team is a strong contender for several other judged awards. The Inspire Award celebrates the strongest qualities of all the judged awards.
- The Team is an ambassador for FIRST programs. They demonstrate and document their work in their community.
- Team is positive and inclusive, and each team member contributes to the success of the Team.
- Team must submit an engineering portfolio. The engineering portfolio must include engineering content, team information and a team plan. The entire engineering portfolio must be high quality, thoughtful, thorough, concise, and well-organized.
- Robot design is creative and innovative, and the Robot performs reliably on the field. The Team communicates clearly about their Robot design and strategy to the judges.
- Team interview session is professional and engaging.

Strongly suggested criteria for the Inspire Award:

- The Team should have an engineering notebook available for the judges to review that provides the detailed information to support the information in the portfolio.

9.5.2 Think Award
Removing engineering obstacles through creative thinking.

This judged award is given to the Team that best reflects the journey the Team took as they experienced the engineering design process during the build season. The engineering content within the portfolio is the key reference for Judges to help identify the most deserving Team. The Team’s engineering content must focus on the design and build stage of the Team’s Robot.

Additional detailed information that is helpful for the Judges would be in the team’s Engineering Notebook and would include descriptions of the underlying science and mathematics of the Robot design and game.
strategies, the designs, redesigns, successes, and opportunities for improvement. A Team is not a candidate for this award if their portfolio does not include engineering content.

Required criteria for the Think Award:

- **Team shows respect and Gracious Professionalism® to everyone they meet at a FIRST Tech Challenge event.**
- Engineering portfolio must have engineering content. The engineering content could include entries describing examples of the underlying science, mathematics, and game strategies in a summary fashion.
- The engineering portfolio must provide examples that show the Team has a clear understanding of the engineering design process including examples of lessons learned.
- The portfolio should inspire the judges to want to see the detailed engineering content in the engineering notebook.
- Portfolio format is less important but enables the judges to understand the team’s design maturity, organizational capabilities and overall team structure.
- Portfolio could reference specific experiences and lessons learned but should capture the summary of the current status of the Team and their robot design.
- Portfolio could also summarize experiences and lessons learned from outreach with concise tables of outcomes

Strongly suggested criteria for the Think Award:

- **Teams** should flag or provide a reference to 6 to 8 pages of the engineering notebook(s) to support the engineering content included in the engineering portfolio.
- Engineering portfolio could summarize how the Team acquired new mentors or acquired new knowledge and expertise from their mentors.
- Engineering portfolio could contain summary of overall Team plan.
- Engineering portfolio could contain information about the plans to develop skills for Team members.

**9.5.3 Connect Award**

Connecting the dots between community, FIRST, and the diversity of the engineering world.

This judged award is given to the Team that most connects with their local science, technology, engineering and math (STEM) community. A true FIRST team is more than a sum of its parts and recognizes that engaging their local STEM community plays an essential part in their success. The recipient of this award is recognized for helping the community understand FIRST, the FIRST Tech Challenge, and the Team itself. The Team that wins the Connect Award actively seeks and recruits engineers and explores the opportunities available in the world of engineering, science and technology. This Team has a clear Team plan and has identified steps to achieve their goals.

Required criteria for the Connect Award:

- **Team shows respect and Gracious Professionalism® to everyone they meet at a FIRST Tech Challenge event.**
- **Team** must submit an engineering portfolio.
- Portfolio must include a Team plan that covers the Team’s goals for the development of team member skills, and the steps the Team has taken or will take to reach those goals. Examples of what the plan could include are timelines, outreach to science, engineering, and math communities, and training
Portfolio must include a summary of how the Team acquired new mentors or acquired new knowledge and expertise from a mentor. Working with mentors from FIRST’s Mentor Matching site is an acceptable way to learn from mentors.

Strongly suggested criteria for the Connect Award:

- **Team** provides clear examples of developing in person or virtual connections with individuals in the engineering, science, or technology community.
- **Team** actively engages with the engineering community to help them understand FIRST, the FIRST Tech Challenge, and the team itself.

**9.5.4 Collins Aerospace Innovate Award**

Bringing great ideas from concept to reality.

The Collins Aerospace Innovate Award celebrates a Team that thinks outside the box and has the ingenuity, creativity and inventiveness to make their designs come to life. This judged award is given to the Team that has the most innovative and creative Robot design solution to any specific components in the FIRST Tech Challenge game. Elements of this award include elegant design, robustness, and ‘out of the box’ thinking related to design. This award may address the design of the whole Robot or of a sub-assembly attached to the Robot. The creative component must work consistently, but a Robot does not have to work all the time during Matches to be considered for this award. The Team’s engineering portfolio must include a summary of the design of the component or components and the Team’s Robot to be eligible for this award. Entries must describe how the Team arrived at their solution.

Required criteria for the Collins Aerospace Innovate Award:

- **Team** shows respect and Gracious Professionalism® to everyone they meet at a FIRST Tech Challenge event.
- **Team** must submit an engineering portfolio.
- The engineering portfolio must include examples of the Team’s engineering content that illustrate how the Team arrived at their design solution.
- **Robot** or robot sub-assembly must be creative, elegant and unique in its design.
- Creative component must be stable, robust, and work reliably.

Strongly suggested criteria for the Collins Aerospace Innovate Award:

- The portfolio should inspire the judges to want to see the detailed engineering content in the engineering notebook.

**9.5.5 Control Award, sponsored by Arm Inc.**

Mastering robot intelligence.

The Control Award celebrates a Team that uses sensors and software to increase the Robot’s functionality in the field. This award is given to the Team that demonstrates innovative thinking to solve game challenges such as autonomous operation, improving mechanical systems with intelligent control, or using sensors to achieve better results. The control component should work consistently in the field. The Team’s engineering portfolio must contain a summary of the software, sensors, and mechanical control, but would likely not include copies of the code itself.

Required criteria for the Control Award, sponsored by Arm, Inc.:
• **Team** shows respect and **Gracious Professionalism** to everyone they meet at a **FIRST** Tech Challenge event.

• **Team** must apply for the Control Award by filling out the Control Award Submission Form, located in Appendix E. The Control Award Submission Form should not exceed 2 pages.

• The team must submit an **engineering portfolio**. The engineering portfolio must include engineering content that documents the control components.

• Control components must enhance the functionality of the **Robot** on the playing field.

Strongly suggested criteria for the Control Award, sponsored by Arm, Inc.:

• Advanced software techniques and algorithms are encouraged.

• Control components should work reliably.

• Additional detailed information can be included in the **Team**’s engineering notebook.

• Learnings from the team about what they tried and what didn’t work with regards to sensors, hardware, algorithms and code.

The Control Award is different from other awards because **Team** must apply for this award. A **Team** applying for this award must turn in their Control Award submission form to the judges at the event. This award focuses on a **Team**’s ability to program a robot that can reliably and efficiently carry out tasks during **Match** play, in a way that improves their ability to score during a match.

The judges should look for:

• What sensors and hardware the **Team** is using on the **Robot**; what worked, what didn’t, and why.

• What algorithm or code the team has programmed their **Robot** with; what worked, what didn’t, and why.

• The judges should pay attention to the program and design process. The design process is more critical than the code itself.

Teams must fill out and turn in the Control Award submission form to be considered for the Control Award. A Control Award binder or notebook is not an acceptable submission. Additional Control information should be located in the engineering notebook.

**9.5.6 Motivate Award**

Sparking others to embrace the culture of **FIRST**!

This **Team** embraces the culture of **FIRST** and clearly shows what it means to be a team. This judged award celebrates the **Team** that represents the essence of the **FIRST** Tech Challenge competition through Gracious Professionalism and general enthusiasm for the overall philosophy of **FIRST** and what it means to be a **FIRST** Tech Challenge Team. This is a **Team** who makes a collective effort to make **FIRST** known throughout their school and community, and sparks others to embrace the culture of **FIRST**.

Required criteria for the Motivate Award:
When doing community outreach, teams should be prepared to talk about FIRST, and spread awareness of the program.

- Team shows respect and Gracious Professionalism® to everyone they meet at a FIRST Tech Challenge event.
- Team must submit an engineering portfolio. The engineering portfolio must include a Team organization plan, which could describe their future goals and the steps they will take to reach those goals. Examples of what the plan could include are team identity, fund-raising goals, sustainability goals, timelines, outreach, finances, and community service goals.

- The Team is an ambassador for FIRST programs.
- Team can explain the individual contributions of each team member, and how these apply to the overall success of the team.

Strongly suggested criteria for the Motivate Award:

- Team as a whole takes part in their presentation, and actively engage with the judges.
- Team shows a creative approach to materials that market their Team and FIRST.
- Team can clearly show the successful recruitment of people who were not already active within the STEM community.
- Team could also summarize experiences and lessons learned from outreach

9.5.7 Design Award
Industrial design at its best.

This judged award recognizes design elements of the Robot that are both functional and aesthetic. The Design Award is presented to Teams that incorporate industrial design elements into their solution. These design elements could simplify the Robot’s appearance by giving it a clean look, be decorative in nature, or otherwise express the creativity of the Team. The Robot should be durable, efficiently designed, and effectively address the game challenge.

Required criteria for the Design Award:

- Team shows respect and Gracious Professionalism® to everyone they meet at a FIRST Tech Challenge event.
- Team must submit an engineering portfolio with an engineering content which could be CAD images or robot drawings of the Team’s overall design and/or components
- Team also documents and implements strong industrial design principles, striking a balance between form, function, and aesthetics.

Strongly suggested criteria for the Design Award:

- Robot distinguishes itself from others by its aesthetic and functional design.
- Basis for the design is well considered (that is inspiration, function, etc.).
- Robot design is effective and consistent with Team plan and strategy.
- The engineering portfolio should inspire the judges to want to see the detailed design content and design journey in the engineering notebook.

9.5.8 Promote Award (Optional)
This judged award is optional and may not be given at all tournaments. Your Judge Advisor will have information about the judging for this award.
The Promote Award is given to the Team that is most successful in creating a compelling video message for the public designed to change our culture and celebrate science, technology, engineering and math. Teams must submit a one-minute long public service announcement (PSA) video based on the PSA subject for the season.

Team may win the Promote Award only once at a Championship level event and only once at a qualifying level event.

PSA Subject for 2020-2021 season:

“Why does FIRST Tech Challenge work?”

Required criteria for the Promote Award:

- Video must meet the following criteria:
  - Video must follow FIRST branding and design standards.
  - Video cannot be longer than 60 seconds.
  - Video must be of a high quality, as submissions may be used later to promote FIRST.
  - Team must have rights to music used in the video.
  - Music and permissions must be listed in video credits.
  - Video must have strong production value.
  - Video must be submitted by the deadline given by the Tournament Director.
- Team must present a thoughtful and impactful video which appeals to the public.
- Creativity in interpreting the yearly theme is required.
- Follow video award submission guidelines.

9.5.9 Compass Award (Optional)
A beacon and leader in the journey of the FIRST Tech Challenge.

This judged award is optional and may not be given at all tournaments. Your Judge Advisor will have information about the Judging for this Award.

The Compass Award recognizes an adult coach or mentor who has given outstanding guidance and support to a Team throughout the year and demonstrates to the Team what it means to be a Gracious Professional. The winner of the Compass Award will be chosen from candidates nominated by FIRST Tech Challenge student Team members, via a 40-60 second video submission. The video must highlight how their mentor has helped them become an inspirational Team. We want to hear what sets the mentor apart.

Required criteria for the Compass Award:

- Video must meet the following criteria:
  - Video must follow FIRST branding and design standards.
  - Video cannot be longer than 60 seconds.
  - Video must be of a high quality, as submissions may be used later to promote FIRST.
  - Team must have permission from the copyright owners for music used in the video.
  - Music and permissions must be listed in video credits.
  - Video must be submitted by the deadline given by the Tournament Director.
- Video highlights the mentor’s contribution to the Team and demonstrates what sets the mentor apart.
• Follow video award submission guidelines.

9.5.10 Judges’ Choice Award
This award is optional and may not be given at all tournaments.

During the competition, the judging panel may meet a Team whose unique efforts, performance or dynamics merit recognition, but doesn’t fit into any of the existing award categories. To recognize these unique Team, FIRST offers a customizable Judges Choice Award. The judging panel may select a Team to be honored, as well as the name of the Judges Choice Award. The Judges Choice Award recognizes a Team for their outstanding efforts but does not factor into the advancement criteria.

9.5.11 Top Ranked Team Award
Teams ranked 1 through 6 (at tournaments with 22 teams or larger), or Teams ranked 1 through 4 (at tournaments with 21 or fewer teams).
10.0 Dean’s List Award

In an effort to recognize the leadership and dedication of FIRST’s most outstanding secondary school students, the Kamen family sponsors an award for selected 10th and 11th grade students known as the FIRST Robotics Competition and FIRST Tech Challenge Dean’s List.

Similar to the very prestigious National Merit Scholarship Award winners, there are three (3) “categories” of FIRST Dean’s List Award students:

1. **FIRST Dean’s List Semi-finalists** – comprised of the two (2) students in their 10th or 11th grade school year nominated by each Team.

2. **FIRST Dean’s List Finalists** – comprised of the students (2, 3, or 4, depending on the region) selected at each State/Regions Championship.

3. **FIRST Dean’s List Winners** – comprised of the ten (10) FIRST Robotics Competition and ten (10) FIRST Tech Challenge students selected from the applicable FIRST Dean’s List Finalists at the FIRST Championship.

The students who earn FIRST Dean’s List Award status as a Semi-finalists, Finalist or Winner, are great examples of student leaders who have led their Teams and communities to increased awareness for FIRST and its mission. These students have also achieved personal technical expertise and accomplishment. It is FIRST’s that these individuals will continue, post-award, as great leaders, student alumni, and advocates of FIRST.

Prestigious colleges have expressed great interest in meeting FIRST Dean’s List’s Award winners and FIRST hopes that each Team will take advantage of the opportunity to nominate the most qualified students as FIRST Dean’s List Nominees!

For more information on the Dean’s List Award, and to see past FIRST Tech Challenge winners, please visit our website! [http://www.firstinspires.org/Robotics/ftc/deans-list](http://www.firstinspires.org/Robotics/ftc/deans-list)

10.1 Eligibility

Every registered FIRST Tech Challenge Team can submit up to two (2) students as FIRST Dean’s List Award Semi-Finalists.

- Students must be a sophomore (grade 10) or junior (grade 11) to be eligible for this award.
  - Note: For regions of the world that do not use grade levels such as this to identify years of schooling: This award is intended for students who are two (2) to three (3) years away from entering college or university. Students that would be attending college or university in the next academic year are not eligible. Mentors will be asked for the year of graduation during the nomination process.
- The coach or mentor nominating the student(s) must submit an essay explaining why the student should receive this award. The essay must be 4,000 characters or less.

10.2 Criteria

Criteria for selection of the FIRST Dean’s List shall include, but not be limited to a student’s:

- Demonstrated leadership and commitment to FIRST Core Values
- Effectiveness at increasing awareness of FIRST in their school and community
- Interest in and passion for a long-term commitment to FIRST
- Overall individual contribution to their Team
- Technical expertise and passion
• Entrepreneurship and creativity
• Ability to motivate and lead fellow Team members

10.3 Dean’s List Nominations
There are specific instructions on how to submit Dean’s List Nominations. There are two sets of instructions, The Dean’s List Nomination Guide – US, and the Dean’s List Nomination Guide – International. Please visit our website for a copy of the guides, which provides in depth information about the Dean’s List, and step by step visual aids to complete the nominations.

## Appendix B – Robot Inspection Checklist

### Team Number: __________

**Robot Inspection Status (circle):**  
PASS / FAIL

<table>
<thead>
<tr>
<th>Team Insp.</th>
<th>Robot Size Inspection</th>
<th>Rule #</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Robot is presented at inspection with all mechanisms (including all components of each mechanism), configurations, and decorations that will be used on the Robot during the competition.</td>
<td>&lt;I7&gt;</td>
</tr>
<tr>
<td></td>
<td>Separately test the Robot in all of its unique starting (pre-match setup) configurations. The Robot fits within the Sizing Tool without exerting undue force on the Sizing Tool sides and top.</td>
<td>&lt;I7&gt;-a RG02&gt;</td>
</tr>
<tr>
<td></td>
<td>Robot Motion Warning Label is attached if servo motors move during the Robot initialization.</td>
<td>&lt;RG02&gt;</td>
</tr>
</tbody>
</table>

### General Robot Rules

<table>
<thead>
<tr>
<th>Rule #</th>
</tr>
</thead>
<tbody>
<tr>
<td>Robot does not contain any components that could damage the Playing Field or other Robots.</td>
</tr>
<tr>
<td>Robot does not contain materials that are hazardous.</td>
</tr>
<tr>
<td>Robot poses no obvious unnecessary risk of entanglement.</td>
</tr>
<tr>
<td>Robot does not contain sharp edges or corners.</td>
</tr>
<tr>
<td>Robot does not contain animal-based, liquid, or gel materials.</td>
</tr>
<tr>
<td>Robot does not contain materials that would cause a delay of game if released.</td>
</tr>
<tr>
<td>Robot does not contain elements that electrically ground the Robot frame to the Playing Field.</td>
</tr>
<tr>
<td>Robot does not contain closed gas devices.</td>
</tr>
<tr>
<td>Robot does not contain hydraulic devices.</td>
</tr>
<tr>
<td>Robot does not contain vacuum based mechanisms.</td>
</tr>
<tr>
<td>Team number is visible from at least 2 sides and meets requirements.</td>
</tr>
<tr>
<td>Alliance Markers are present and meet requirements.</td>
</tr>
<tr>
<td>Energy used by the Robot, (i.e., stored at the start of a Match), shall come only from approved sources.</td>
</tr>
<tr>
<td>Robot is not capable of launching its own components.</td>
</tr>
</tbody>
</table>

### Robot Mechanical Parts and Materials Rules

<table>
<thead>
<tr>
<th>Rule #</th>
</tr>
</thead>
<tbody>
<tr>
<td>All components on the Robot are from allowable raw materials and Commercial Off The Shelf products.</td>
</tr>
</tbody>
</table>

### Robot Electrical Parts and Materials Rules

<table>
<thead>
<tr>
<th>Rule #</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Main Power Switch is installed properly, labeled, readily accessible, and visible to competition personnel. The TETRIX, REV, and MATRIX switches are the only allowed Main Power Switch.</td>
</tr>
<tr>
<td>All batteries are securely attached to the Robot in a location where they will not make direct contact with other Robots or the Playing Field.</td>
</tr>
<tr>
<td>Exactly one (1) Robot Main Battery Pack of an approved type is on the Robot and it is properly connected to the Main Power Switch and either the REV Expansion Hub or REV Control Hub.</td>
</tr>
<tr>
<td>Where present, fuses must not be replaced with fuses of higher rating than originally installed or according to manufacturer's specifications. Replaceable fuses are single use only.</td>
</tr>
<tr>
<td>Allowed electronic devices are powered by power ports on the REV Expansion Hub or REV Control Hub except as noted in &lt;RE05&gt;a&amp;b, &lt;RE12&gt;, and &lt;RE13&gt;.</td>
</tr>
<tr>
<td>The REV Expansion Hub and/or REV Control Hub is powered by the Robot main battery.</td>
</tr>
<tr>
<td>REV SPARK Mini Motor Controllers are powered by the Robot main battery.</td>
</tr>
<tr>
<td>Allowed sensors may only receive power from the REV Expansion Hub or REV Control Hub</td>
</tr>
<tr>
<td>Light sources (including LEDs) are not focused or directed in any way, except for the REV Robotics 2m Distance Sensor. Light sources are powered by allowed methods.</td>
</tr>
<tr>
<td>Video recording devices, if used, are powered by an internal battery and their wireless communication capability is turned off.</td>
</tr>
<tr>
<td>The Robot Controller Android device (if used) is powered by its internal battery or by the built-in charging feature of the REV Expansion Hub.</td>
</tr>
<tr>
<td>Exactly one Robot Controller a) Android Device + REV Expansion Hub or b) REV Control Hub) is required. One additional REV Expansion Hub is allowed.</td>
</tr>
<tr>
<td>The only allowed Motor and Servo Controllers are: REV Expansion Hub, REV Control Hub, REV Servo Power Module, REV Spark Mini Motor Controller, and VEX Motor Controller 29.</td>
</tr>
<tr>
<td>Robot contains no more than eight (8) DC motors of the allowed models.</td>
</tr>
<tr>
<td>Robot contains no more than twelve (12) servos. They must be compatible with the attached REV Expansion Hub, REV Control Hub, REV Servo Power Module, or VEX Motor Controller 29 and not exceed the manufacturer specifications for the controller.</td>
</tr>
<tr>
<td>Robot contains only allowed sensors and they are connected only to the REV Expansion Hub or the REV Control Hub.</td>
</tr>
<tr>
<td>Power and motor control wires must use consistent color coding with different colors used for the positive (red, white, brown, or black with a stripe) and Negative/Common (black or blue) wires.</td>
</tr>
<tr>
<td>Power, motor control, servo and sensor wires are the correct size.</td>
</tr>
<tr>
<td>If electronics are grounded to the Robot frame, the only approved method is the REV Robotics Resistive Grounding Strap. If needed, the REV Robotics Anderson Powerpole to XT30 adapter may connect to the Resistive Grounding Strap. No other grounding straps or cables are allowed.</td>
</tr>
<tr>
<td>Approved electrical and electronic devices may be modified to make them more usable; they may not be modified internally or in any way that affects their safety.</td>
</tr>
<tr>
<td>✔ ✔ Wheel/Tread Playing Field Damage Test - Optional Rule #</td>
</tr>
<tr>
<td>Robot did not damage the Playing Field tile. [This is an optional test that is performed only when an Inspector believes that the drivetrain tread may damage a Playing Field tile.]</td>
</tr>
</tbody>
</table>

General Comments or Reason(s) for Failure (if any):

__________________________________________________________________________

Field Inspector
Appendix D – Control Award, Sponsored by Arm, Inc. Submission Form & Instructions

To be considered for the Control Award Sponsored by Arm, Inc., Teams must submit a Control Award Submission Form. On this form, Teams identify and summarize the key control elements that make their Robot unique. Included is a description of key observable actions for judges to look for as well as the sensor and algorithm use that make it all possible. Judges will use this form for both evaluating control designs and when observing Robots on the competition field.

Information on this form will typically fit on one page, with no more than two (2) pages submitted.

**Autonomous Objectives**
List the overall actions that the Robot can complete. These should include scoring actions as well as other positioning and defensive operations. The Robot does not have to do accomplish all these in every program but should be demonstrable in at least one autonomous program.

**Sensors Used**
List the sensors used to control the Robot and a brief description of how they are used.

**Key Algorithms**
List the key algorithms that make your Robot unique or are vital to its success on the field. Particularly complex or unique algorithms or those that integrate the use of multiple sensors are good candidates to highlight here.

**Driver Controlled Enhancements**
List any advanced control elements that are used during the Driver-Controlled Period to enhance performance. These may include signaling operations when a certain condition is detected on the field, auto-complete functions, fail-safe algorithms, or just any enhancements that make the control of the Robot easier or more efficient for the driver.

**Autonomous Program Diagrams**
For Autonomous operations, Teams should draw and label a typical path the Robot takes. The labeled points identify key observable actions the Robot makes. For each labeled point, a brief description of what is taking place should be noted (see example below). Especially describe those key operations where adjustments are made to ensure accurate and repeatable performance.

For Teams with multiple Autonomous programs, it is not necessary to document every program on a separate sheet. It is sufficient document the most commonly used or complex programs and note variances for the rest.

**Additional Summary Information (optional)**
For those Teams that have developed many different control features, they may want to provide additional information to assist the judges in understanding their work. This is a place where Teams can provide more detailed information about their designs. It should be organized such that separate topics are easily identified and can be quickly found.
